

PLATFORM MOUNTED ROLLING BENCHES

The Winter Gardenz platform mounted rolling bench system is a strong and durable commercial grade side shifting bench system designed for best utilisation of available greenhouse floor space and plant production. Typical installations of this bench system can increase productive growing area within a greenhouse by approx 20% to 30%. This is achieved by reducing the necessity for aisles/ walkway access between each and every bench. Having the ability to roll the benches sideways allows you to open a single walkway around a single bench as and when required.

Suitable for larger production greenhouses the platform mounted rolling bench system is designed and manufactured by Winter Gardenz in New Zealand and is built to last. Comprising of quality materials and made to a very high standard to provide years of trouble free service. Standard bench tops are 1.2m or 1.5m wide, with bench lengths being 2m, 4m, 6m, 8m, 10m, 12m and 16m long, however custom sizes are available. The benches are supplied with a mesh top as standard but are designed to take an optional flood and drain (ebb and flow) tray if required.

STANDARD BENCH SPECIFICATIONS

DIMENSIONS & CAPACITY

BENCH TOP HEIGHT	Aprox 800-900mm as standard. Other heights are available.
BENCH TOP WIDTH	Aprox 1200mm or 1500mm as standard. Other widths are available.
BENCH TOP LENGTH	Aprox 2m, 4m, 6m, 8m, 10m, 12m and 16m as standard. Other lengths are available.
MAX WEIGHT CAPACITY	70kg/m ²

All platform mounted rolling benches are available with mesh tops as standard, or optional Flood & Drain trays (Ebb and Flow) to suit.

Winter Gardenz rolling benches are generally constructed using aluminium (with optional powder coat finish), but can also be constructed using steel (galvanised steel) or stainless steel. Custom sizes and configurations are available.

MATERIALS

FRAME	Aluminium
